

CHAINCARDS

Team CapsLock

THINK!

- Even in 2017, we use signatures to authenticate transaction. We actually draw on paper and give permission.
- Anyone can paste picture and colour photocopy your Aadhar card to identify as you!
- You use different apps to manage your day to day transactions. Example hotel, train, flight booking and financial transactions as well.

PROBLEMS

- Anyone can fake your signatures and en-cash the cheques
- Anyone can create fake identity cards and enter places with your identity
- People forget to take their id cards at important places

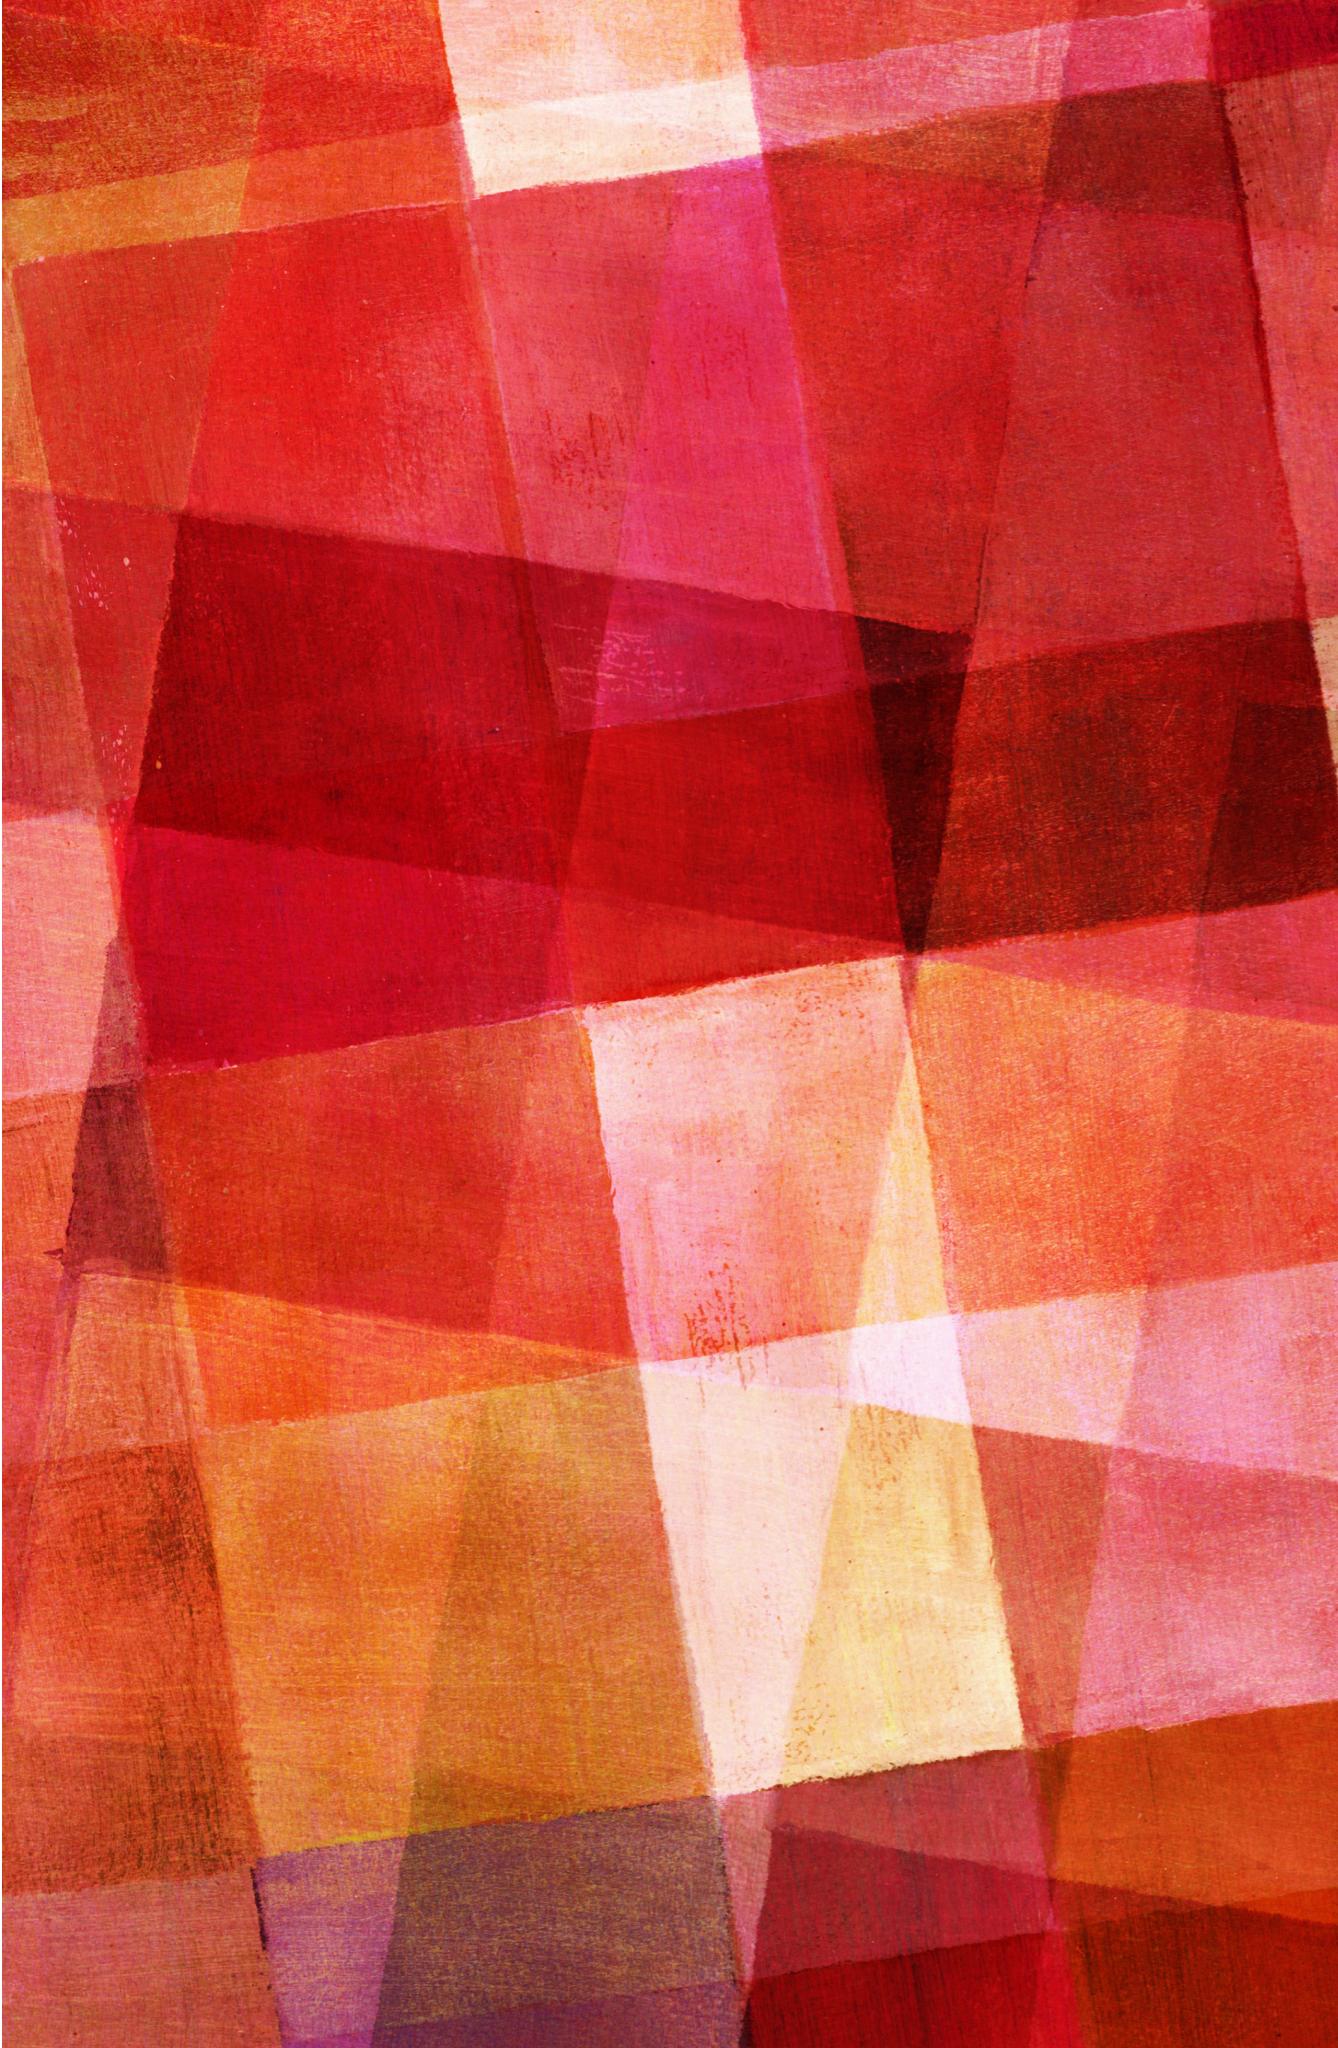

THINK!

How do you identify someone? The problem is not as easy as it sounds

Identity Crisis

Level: Johnny Depp

PRESENTING CHAINCARDS

CAN BE USED FOR

- Banks
- Hotels
- Airports
- Keyless entry in places
- Stations
- or any place you need to authorise yourself

Tracks: Cloud Security, Cloud

Innovation, Hospitality

Uses: Finocial API

ADVANTAGES

- All the identities would be verified before allowing entry
- History of all the transactions of people
- Just carry your smartphones. No id cards.
- No need of IRIS scanner or fingerprint scanner. Eliminated the need of external hardware.
- Connecting people globally!
